# WHO WE ARE

---

## OUR HISTORY & MISSION

Addiction Recovery Systems (ARS) was established in 2004 to provide medication-assisted treatment for opioid use disorder.

ARS restores lives by providing state of the art treatment to individuals affected by the disease of addiction.

The Extended Hours Evening Program was created in order to fill a critical need that was identified within the community; having immediate access to after-hours substance use disorder treatment, as well as providing treatment for individuals who may have require alternatives to morning programs due to family and employment responsibilities.

**ARS of Turnersville  
Offers Methadone and  
Suboxone Treatment**

## WHAT IS MEDICATION- ASSISTED TREATMENT?

Medication Assisted Treatment (MAT) is the administering and dispensing of Methadone and other federally approved medications (such as Suboxone or Vivitrol) at relatively stable dosage levels, in conjunction with appropriate social, clinical, and medical services.

## WHY CHOOSE MAT?

- MAT is the safest and most effective treatment available to people suffering from opioid use disorder
- ARS is among the area's most successful treatment centers with an average of 80% of ARS patients stopping use of illegal opiates after 12 months of treatment.
- At ARS you will create a personalized treatment plan outlining your goals for your recovery, and ARS will work with you to ensure treatment fits your schedule.

# OUR SERVICES

### Outpatient & Intensive Outpatient Programs

### Individual & Group Counseling

### Peer Outreach & Support

---

## WHAT TO EXPECT:

---

During your admission, you will meet with our admissions counselor, the director of nursing, and the doctor to complete intake paperwork and medical and clinical assessments.. Please plan to spend approximately 1-2 hours at our office.

Our goal is to start you on the appropriate treatment, including medication the same day. In order to receive medication on your first day, you need to have not used for at least 12 hours prior to arriving at the facility. After meeting with the doctor and completing your paperwork you will receive your medication at our nursing station.
